Sparsity amplifies the effective clustering strength
analytic (slope 1)
$\mu = 10$ (slope 0.92)
$\mu = 20$ (slope 0.91)
$\mu = 40$ (slope 0.91)
effective clustering strength $\beta_{\text{eff}} = \log(\langle C \rangle / \langle C \rangle_{\text{CSR}})$
log(1/density) (sparser →)
