(a) cascade-size distributions
$P(S \geq s)$
cascade size s
$N = 50$
$N = 100$
$N = 200$
$N = 400$
$N = 800$
$s^{-1/2}$ ($\tau = 3/2$)
(b) collapse: mean-field branching $\tau = 3/2$
$s^{1/2} P(S \geq s)$
s/N
$N = 50$ ($\sigma = 1.02$)
$N = 100$ ($\sigma = 0.99$)
$N = 200$ ($\sigma = 1.00$)
$N = 400$ ($\sigma = 1.00$)
$N = 800$ ($\sigma = 1.00$)
