
(a)
random walk (Brownian)
Lévy ($\alpha = 1.5$)
Lévy ($\alpha = 1.0$)
Brownian:
bounded (light tail)
heavy tail:
rare long relocations
$P(L \geq \ell)$
step length ℓ (median-scaled)
(b)
random walk (θ=0.35)
fit slope -0.47, R^2=0.95
Lévy (θ=0.35)
fit slope -0.45, R^2=0.98
$P(S \geq s)$
active-cluster size s
